

The Remarkable Stephane Bancel
Pamela A. Popper, President
Wellness Forum Health

Almost one year ago, I reported a curious coincidence. I discovered an interesting article in a virology journal that suggested that SARS-CoV-2 might have been developed in collaboration with other entities.

BLAST is an acronym for Basic Local Alignment Search Tool. It's a computer algorithm available for use at the National Center for Biotechnology Information (NCBI) website. The algorithm allows scientists to quickly query a DNA sequence to find matches or patterns of similarity between protein sequences. Scientists worldwide deposit their sequences in this database when they make new discoveries.

A distinguishing feature of SARS-CoV-2 is the furin cleavage site and the 19-nucleotide insertion in the spike protein, particularly its two consecutive CGG codons. Researchers conducted a BLAST search and found a 100% reverse match in a proprietary U.S. patent filed on February 4 2016 (US patent 9,587,003).¹ According to the researchers, statistical analysis shows that the probability of this sequence randomly being present in a 30,000-nucleotide viral genome is 3.21×10^{-11} (less than one in one billion). The owner of the patent is Moderna, which has earned billions of dollars making COVID-19 vaccines using mRNA technology and its president Stephane Bancel.²

While nothing is impossible, a SARS virus mutating in nature and jumping species that contains a furin cleavage site that does not exist in nature but does exist in a Moderna patent, is not likely at all. The authors write, "The presence in SARS-CoV-2 of a 19-nucleotide sequence encoding an FCS at amino acid 681 of its spike protein with 100% identity to the reverse complement of a proprietary MSH3 mRNA sequence is highly unusual. Potential explanations for this correlation should be further investigated."³

One likely explanation is that Bancel and Moderna might have been involved in orchestrating the COVID-19 debacle.

Bancel's recent public comments provide good reasons to believe this. While attending the World Economic Forum (WEF) conference in Davos (January 2023) – where the reptiles of the world go for training on how to destroy humanity – Bancel admitted to a CNBC reporter that Moderna was working on a COVID-19 vaccine in early January 2020 – before it was called COVID-19.

During this interview, the CNBC host stated that the last time they were together in Davos (referring to her and Bancel), "you came up to me in this small room

and you were talking about how you had actually the – you were working on a vaccine for – for COVID. And at that point COVID-19 didn't even really exist in our minds." Bancel responded by acknowledging "I think there was no name at that time."⁴

On March 16 2020, only five days after the World Health Organization (WHO) declared that SARS-CoV-2 was a worldwide pandemic,⁵ Fauci's NIAID announced that a clinical trial for an mRNA vaccine (mRNA-1273) for COVID-19 was beginning and healthy volunteers were already being enrolled. According to Fauci, "This Phase I study, launched in record speed, is an important step..." in finding a safe and effective vaccine for SARS-CoV-2.⁶ Record speed, indeed.

During a panel discussion at the same Davos conference this year (2023) called State of the Pandemic, Bancel said that in 2019 he asked co-workers "How we make [sic] a billion dollars next year?" He said they looked at him "a bit funny" and asked "What?" He replied, "Yeah, we need to make a billion dollars next year, there's going to be a pandemic."⁷

According to a Reuters report, Bancel said during this same panel discussion that "he would like to have factories making vaccines based on its messenger RNA technology on every continent..." and added that he was working with the Chinese Communist Party to build factories in China and supply COVID-19 vaccines for the Chinese people.⁸ The People's Republic of China was identified by the Director of the FBI to be "the greatest long-term threat" to U.S. National Security in 2020.⁹

Bancel's inside track has paid off handsomely. Moderna grossed \$18.4 billion from its incredibly useless and harmful COVID vaccines in 2022 and expects to take in \$5 billion more from COVID vaccines in 2023.¹⁰

So to tie this all together, Moderna and Bancel filed for a patent on the nucleotide sequence for the furin cleavage site that is unique to SARS-CoV-2 in 2016. In 2019, Bancel told his co-workers that a pandemic that would take place the following year would generate billions of dollars in sales for Moderna. Moderna started working on a COVID-19 vaccine before it was called COVID, and was ready to launch a clinical trial only five days after the WHO declared that SARS-CoV-2 was a pandemic. And the icing on the cake is Bancel's current negotiations with a foreign government known to be a threat to U.S. national security which will yield billions more in profits.

Bancel is a remarkably psychic guy, and probably the richest psychic in the world. He also suffers from a debilitating condition called "diarrhea of the mouth." Symptoms include arrogance and an inability to exercise self-restraint when discussing events which might have involved criminal activity and liability.

I suffer from a different condition called pathological determination. This is described as an obsessive, compulsive focus on achieving goals such as making criminals pay for what they have done.

Keep talking Mr. Bancel. I'm listening.
